## KASWS – Karlsruhe Semantic Web Services Tutorial

**Dr. Sudhir Agarwal**

**Dr. Stephan Grimm**

**Dr. Peter Haase**

**PD Dr. Pascal Hitzler**

**Denny Vrandecic**

**Martin Junghans**

# Agenda

- Recap
- Process composition
  - Rent a movie

# Recap

- Web services
  - SOA
  - Software paradigm
  - Standards
- Semantic Web services
  - Description formalism
  - KASWS

# Current Approaches: WSMO, OWL-S

- Top-down approaches
- provide highly expressive frameworks
  - Can support automation for discovery, composition
  - Despite promising results,  
large-scale uptake is still to be witnessed
  - A limitation is their complexity
    - From computational and
    - From knowledge-acquisition perspective
- Even worse: lack of support for **dynamics & mobility**,  
which are essential for services (and processes)

- Process formalism
  - Pi calculus
  - Allows for formal semantics
  - Overcomes mentioned shortcomings
- Covers services
  - Static and dynamic Web sites and Web pages can also be modeled as services
- Dynamics
- Mobility

# Hands-on

- Purpose: understand challenges
- Compose a process
  - Rent a movie

# First Step

- Discover a movie rental service
  - User query to a repository (service search engine)
  - Query contains
    - Functional properties
      - Rental, movies, DVD, shipping, Germany, ...
      - Non-functional properties
        - Pay as you go, low price, ...
  - Requires semantic description of services
  - May ranks search results, using non-functional properties

# Movie Rental Activities

**NETFLIX**

Buy / Redeem Gift    Member Sign In

**Free, fast DVD delivery in about 1 business day!**

**Rent** what you want.

Just point and click to add movies & TV episodes to your list from over 100,000 titles.

**Receive** what you wanted.

We rush DVDs from your list with fast, free delivery in about 1 business day.

**Watch** when you want.

Keep each movie as long as you want.

**Exchange** as often as you want.

Simply return 1 movie in its prepaid envelope to get another - as often as you like.

**Streaming** instantly to your TV

PLUS

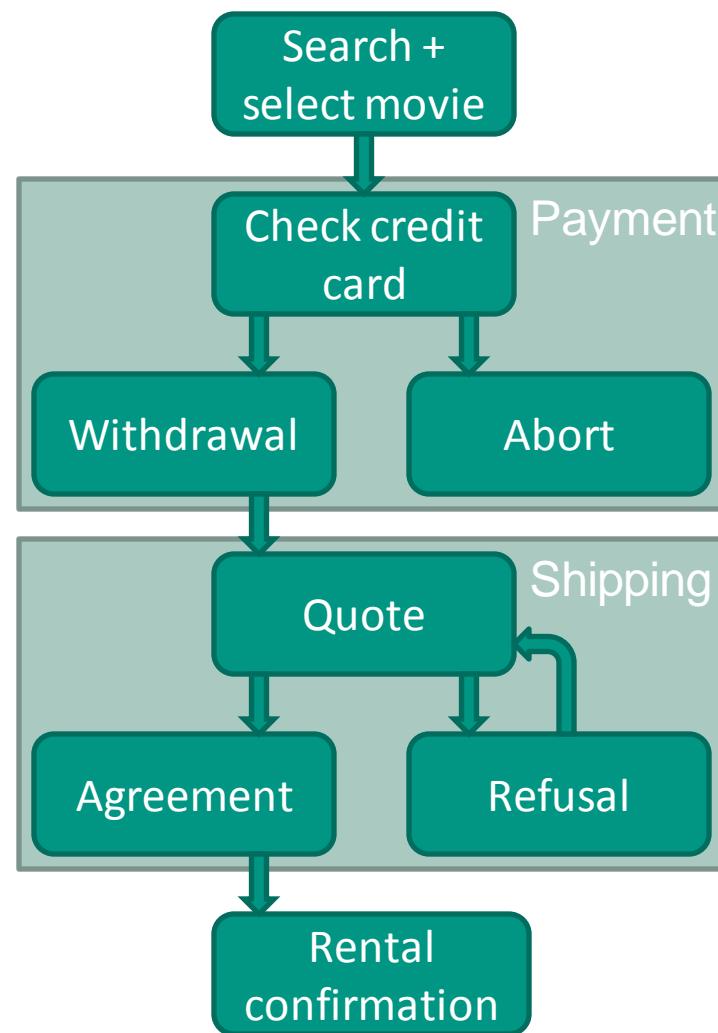

As a bonus to your DVDs by mail, instantly watch some movies on your TV over the Internet - anytime!

# Process Steps (very informal)

# Process Entities

- Client / user
- Movie Rental Company
- Credit Card Vendor
- Two shipping providers

# Process Composition Challenges

- Choreography
  - Find proper services
  - Here, bargain the communication pattern
- Data flow
  - Not considered in depth
  - Semantics and syntax
- Semantics
  - Must describe all process resources, i.e., entities and data

# Movie Rental Process Extension

- Semantic SPKI authentication
  - Age verification
- Credentials
  - Certificates that prove truth of non-functional properties
- Policies of trust required
  - E.g., allow / deny all, except for following issuers x, y, z.

# Summary

- Semantic Web services description
  - Today's focus was
    - What to model
    - How to model
    - How to compose
    - But not the technologies or the pi calculus notation
