Semantic Web

Semantic Web

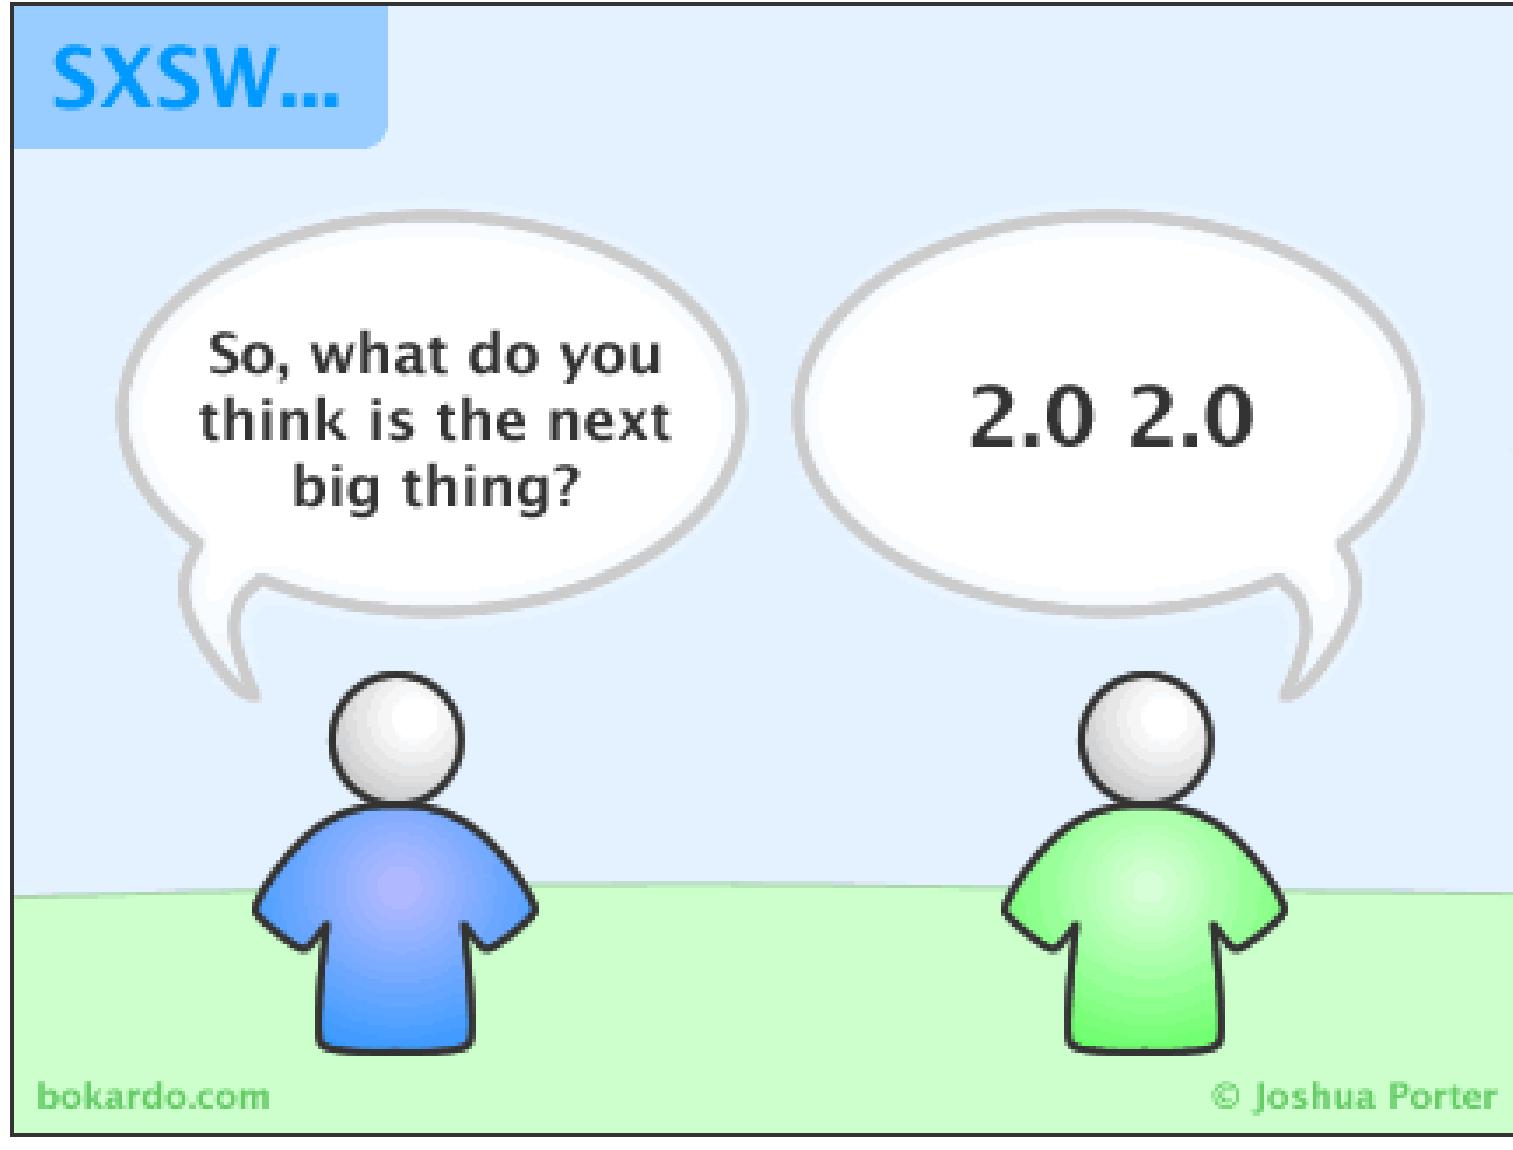

- case studies in closed domains
- complex & comprehensive modeling
- team of knowledge engineers
- sophisticated reasoning
- unwieldy tools and obscure specifications

Web Science Process Model

Semantic Web 2.0

SXSW...

So, what do you think is the next big thing?

Semantic Web of Data

- A World Wide Web (of data)
- Bottom-up, user-centred approach
- “A little semantics goes a long way”

Semantic Web Application

- Nicht notwendig: RDF Backend
 - Implementierung ist irrelevant
 - Kann aber auch RDF-basiert sein – Joost
- Wichtig: Schnittstellen nach außen
 - RDF
 - SPARQL
 - Datenaustausch
- Nicht sein sondern schein

RESULTS

Finalist teams

The following teams have successfully passed the qualifying examination and will participate in the finale in July:

- **BlueCook**

Rupali Bodhankar, Ashish Bindra, Kristoffer Canilang, Seth Galbraith, Glenda Hedden, Isabelle Bichindaritz

- **CookingCAKE**

Christian Fuchs, Christoph Gimmler, Simon Günther, Lukas Holthof, Ralph Bergmann

- **CookIIS**

Norman Ihle, Regis Newo, Alexandre Hanft, Kerstin Bach, Meike Reichle

- **JaDaCook2**

P. Javier Herrera, Pablo Iglesias, Ana M Garcia Sanchez, Belen Diaz-Agudo

- **WikiTaaable**

Fadi Badra, Julien Cojan, Amelie Cordier, Jean Lieber, Thomas Meilender, Alain Mille, Pascal Molli, Emmanuel Nauer, Amadeo Napoli, Hala Skaf-Molli, Yannick Toussaint

SNPedia

SNPedia shares information about the effects of variations in DNA, citing peer-reviewed scientific publications. It is used by Promethease to analyze and help explain your DNA.

Rs4778241

rs4778241 is part of a haplotype spanning 166kB on chromosome 15, defined by 13 SNPs listed below, found in 97% of all Caucasians with blue eyes. In this haplotype, variations in [rs1129038](#) and [rs12913832](#) are relatively common in Caucasians though rare among other ethnic groups.[[PMID 18172690](#)]

The "h-1" haplotype found in homozygous state in 97% of individuals with blue eye color is composed as follows [[PMID 18172690](#)]:

[rs4778241\(C\)](#)

[rs1129038\(A\)](#)

[rs12913832\(A\)](#)

[rs12913832\(G\)](#)

ABOUT

Welcome to The Spittoon, a blog written by the people of 23andMe. Using nothing more than a bit of saliva (Get it? The Spittoon!), the genotyping process we use analyzes more than 580,000 locations in a person's genome. Then we help our customers read and understand their DNA using tools available on our website, www.23andme.com.

Find us on Twitter.

And the Winner Is ...

Published by MattC at 11:28 am under 23andMe and you

May

2008

The judges have met and a winner has been chosen.

In the first 23andMe Win Your Genome Contest, the challenge was to describe Lilly Mendel – a real person whose data are presented in the 23andMe demo account – based on her genetic information alone. As we declared in the announcement of the contest, entries were judged based on accuracy, creativity and cleverness.

Could this be Lilly Mendel?

Cleverness we got. More than one entrant actually claimed to BE Lilly Mendel. Many entries employed flattery by concentrating on Lilly's physical attractiveness, intelligence and athletic ability – very clever. As for creativity, we have no idea where some of you got the idea that Lilly's family harbors a secret fear of "gigantism," that she enjoys dancing the tango or that her nose twitches when she gets angry. And though her genes may indicate a preference for the bignay fruit, we have no idea if she has ever tasted it.

Aufgabe

- Was ist die Zukunft des Semantic Webs?
- Wie sieht das Programm für die nächsten 10 Jahre aus?

Mittwoch Vorlesung

Anmeldung für Prüfungen läuft!
